EDUCATION

Purdue University

West Lafayette, IN

Bachelor of Science in Computer Engineering

Expected May 2027

- Relevant Coursework: Embedded Systems, Software Engineering, Data Structures and Algorithms, Computer Graphics, Artificial Intelligence, Computer Security

EXPERIENCE

SoCET Team Member

Aug. 2025 – Present

SoCET Chip Implementation/PCB Research and Design - SoCET @ Purdue

West Lafayette, IN

- Contributed to 5 PCB designs and prototypes using KiCad and Altium, developing schematics and layouts for custom semiconductor and FPGA systems
- Designed 1 FPGA interface board connecting 1 external 3.3V SRAM device and peripherals through the HSMC interface, supporting high-speed memory communication
- Routed 100+ address, data, control, and interface signals while implementing and debugging FPGA-to-SRAM memory interfaces for hardware testing and system validation

Software and Design Intern

May 2025 – Aug. 2025; May 2026 – Aug. 2026

Spry Brands Inc.

Anderson, IN

- Designed and developed 300+ customer-facing, customizable products using XML, PageFlex Studio, and backend software including Liff
- Automated 10 customization, data-import, and production workflows, reducing customer data creation time by approximately 50% through software automation
- Supported 100+ clients by implementing reusable website templates, backend data workflows, and software components for marketing, sales, and outreach

PROJECTS

Tiny Machine Learning Gesture Classifier | *Arduino, C++, TinyML*

Dec. 2025 – Jan. 2026

- Developed and deployed a TinyML gesture-classification model on an Arduino using onboard accelerometer and gyroscope sensors and C++
- Processed real-time IMU data and implemented sensor preprocessing, feature extraction, and embedded model inference for sign-language gesture classification
- Integrated the sensor-to-inference pipeline on resource-constrained hardware and validated system behavior through iterative hardware testing and debugging

Rudimentary Game Boy System | *C, RP2350, SD Card*

Nov. 2025 – May 2026

- Developed a Game Boy-inspired embedded system on the RP2350 Proton Board with 2,000+ lines of C supporting game logic, hardware input, graphics, and SD card functionality
- Implemented game-state management, peripheral input handling, system control, and display output for a 120×120 pixel display
- Integrated hardware peripherals and SD card interfaces while completing 25+ test cases and 50+ debugging iterations to resolve software, timing, and system-integration issues

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Verilog, Java, JavaScript, MATLAB

Embedded & Hardware: Embedded Systems, FPGA, Digital Logic, PCB Design, Arduino, RP2350, IMU Sensors, SRAM, Analog Circuit Design, Op-Amps, Soldering

Interfaces: HSMC, Memory Interfaces, I/O Interfaces, SD Card Interfaces

Software & Tools: Git, GitHub, Linux, KiCad, Altium, CAD, VS Code, PageFlex Studio, Liff, XML, Zapier, NetSuite

Languages: English (Fluent), Spanish (Conversational), Hindi (Conversational), Gujarati (Conversational)

Certification: Harvard TinyML3: Deploying TinyML
