EDUCATION

Purdue University

West Lafayette, IN

Bachelor of Science in Computer Engineering

Expected May 2027

- Relevant Coursework: Embedded Systems, Software Engineering, Computer Graphics, Data Structures and Algorithms, Artificial Intelligence, Computer Security

Harvard University

Online

TinyML3: Deploying TinyML

Completed 2026

Hamilton Southeastern High School

Fishers, IN

High School Honors Diploma; Summa Cum Laude | PLTW Engineering Program

Graduated Jun 2023

EXPERIENCE

Software and Design Intern

May 2025 – August 2025

Spry Brands Inc.

Anderson, IN

- Designed and developed 300+ customer-facing, fully customizable products using XML, PageFlex Studio, and backend programming software such as Liftoff
- Streamlined production workflow by using licensed third-party software to automate customization and data imports
- Collaborated with cross-functional teams to integrate backend systems with product templates, allowing for seamless and efficient updates
- Designed and implemented customizable website templates, enabling marketing and sales teams to streamline client outreach and improve lead generation

Team Member

August 2025 - January 2026

PCB Implementation Research and Design

West Lafayette, IN

- Learned and used industry software such as KiCAD and Altium to start on the basics of PCB design
- Made use of an organizational database that tracked and coordinated ideas and efforts to further project design and implementation
- Started working on creating and implementing PCBs that could be used in the future for chips that chip design teams have been working on and have created

PROJECTS

Tiny Machine Learning Project | *Arduino, TinyML, IMU Sensors*

December 2025 – January 2026

- Developed and deployed a TinyML model on a microcontroller platform using an Arduino and onboard sense libraries
- Processed IMU sensor data and implemented inference pipelines for real-time classification of sign language
- Validated model accuracy and system behavior through iterative testing on physical hardware

Rudimentary Game Boy System | *Analog Circuit Design, Digital Logic*

December 2025

- Designed and implemented a simplified Game Boy-inspired system, including game logic, input handling, and output display
- Developed a basic hardware/software architecture to simulate gaming functionality, and implemented control logic for user input, game state transitions, and rendering updates
- Debugged and tested system behavior to ensure correct timing, responsiveness, and functionality while gaining hands-on experience with low-level system design, digital logic concepts, and embedded-style development

TECHNICAL SKILLS

Languages: Python, Java, C, HTML, CSS, MATLAB, English (Fluent), Spanish (Conversational), Hindi (Conversational), Gujarati (Conversational)

Hardware: Analog Circuit Design, Op-amps, 555 Timers, Breadboarding, Soldering, FPGA

Tools: CAD, Arduino, Oscilloscope, KiCAD, Altium, PageFlex Studio, XML

Certifications & Awards: 1st Poom Black Belt Taekwondo, AP Scholar with Honors, Harvard TinyML3: Deploying TinyML
